Shrikant Vijaykumar Oza

AVP – Salesforce Architect | Agentforce, AIforce & Claudeforce | Salesforce COE, Barclays

Pune, India | +91-9175922133 | ozashrikant@yahoo.com

Portfolio: https://ozashrikant.github.io/profile/ | LinkedIn: https://www.linkedin.com/in/shrikant-oza/

PROFESSIONAL SUMMARY

AI-focused Salesforce Architect with 14 years of IT experience (8+ in Salesforce), specialising in **Agentforce, AIforce and Claudeforce** alongside Service Cloud and Experience Cloud. Leads the Salesforce Center of Excellence (COE) at Barclays, defining platform strategy, architecture standards and AI governance. Architects secure, compliant AI solutions: Agentforce agents, Prompt Builder, Einstein Trust Layer, Data Cloud grounding, and MCP / Claude integrations, backed by banking-grade security (GDPR, FCA), DevOps/CI-CD and CSO remediation.

CORE COMPETENCIES

- Agentforce, AIforce & Claudeforce Architecture
- Salesforce Architecture and Scalable Application Design
- Einstein Trust Layer, Responsible AI & AI Governance
- Service & Experience Cloud Architecture and Design
- Lightning Web Components (LWC) and Aura Components
- Cybersecurity Remediation (OWASP, FLS/CRUD, AppOmni, Shield)
- SOQL/SOSL Performance Tuning, Selective Queries
- Design Patterns (Factory, Strategy, Unit of Work)
- Agent Design: Topics, Instructions, Guardrails, Actions
- Prompt Engineering & Prompt Builder Templates
- MCP & Claude Integrations with Salesforce
- Apex (Classes, Triggers, Batch, Queueable, Schedulable)
- Lightning Platform, Flows, Declarative Automation
- Tech-Debt Remediation & Code Quality (PMD, SonarQube)
- Integrations (REST/SOAP, Named Credentials, External Services)
- Data Management, Data Model Design, CRM Analytics

CERTIFICATIONS

- Salesforce Agentforce Specialist
- Salesforce Platform Developer I (PD1)
- Salesforce Platform Developer II (PD2)
- Salesforce Platform App Builder
- Salesforce Administrator

TECHNICAL SKILLS

AI & Agentforce	**Agentforce** (Agent Builder, Topics, Instructions, Guardrails, Agent Actions, Atlas Reasoning Engine, Agentforce for Service, Agentforce Testing Center), Prompt Builder & Prompt Templates, Einstein Trust Layer (data masking, zero data retention, toxicity detection, audit trail), Einstein Copilot, Data Cloud (data grounding, unified profiles, Data Library / RAG), Model Builder & Bring-Your-Own-LLM, Einstein Generative AI features (Service Replies, Case Summaries, Knowledge Creation)
Claudeforce	**Claudeforce** (Salesforce + Anthropic): Salesforce in Claude plugin and prebuilt skills, Claude as reasoning model across Agentforce and Slack, Claude Tag (Slack), governed data access through Salesforce permissions, sharing rules, FLS and Trust Layer, Claude-driven reporting and dashboards
AI Integration	MCP (Model Context Protocol) servers for Salesforce, Apex / Flow / REST invocable actions for agents, Named Credentials, External Services, Platform Events, LLM prompt design and evaluation
Languages	Apex, JavaScript (ES6+), SOQL/SOSL, HTML/CSS
Frameworks	Lightning Web Components (LWC), Aura
Salesforce	Service Cloud, Experience Cloud, Flow Builder, Validation Rules, Sharing & Security, CRM Analytics
Security	AppOmni, Salesforce Shield, OWASP, CRUD/FLS, Guest User hardening, Permission Set governance
DevOps	Git, CI/CD (GitHub Actions/Azure DevOps), SFDX, Packaging, Change Sets
Testing	Apex Unit Tests, Jest for LWC, Agent / Prompt Testing, Security Testing, UAT Coordination
Tools	Data Loader, Workbench, Postman, Developer Console, VS Code, PMD/SonarQube, CRM Analytics (CRMA)
Integration	REST/SOAP APIs, Platform Events, Named Credentials, External Services

PROFESSIONAL EXPERIENCE

Barclays | Pune, India **Jan 2019 – Present**

AVP, Salesforce Architect & Tech Lead (Agentforce / Salesforce AI)

Architected, designed, and hardened Salesforce and AI-enabled applications across multiple business lines, partnering with product owners, enterprise architects, cybersecurity, and operations to deliver secure, performant features.

Key Responsibilities & Achievements

- Led the Salesforce Center of Excellence (COE): platform strategy, architecture standards, and AI governance (agent design standards, data-access models, testing and release controls) across multiple delivery teams.

- Architected Agentforce solutions for Service Cloud with topics, instructions, guardrails, and custom actions (Apex, Flow, REST); built Prompt Builder templates grounded with Data Cloud and Knowledge under Einstein Trust Layer controls.
- Introduced MCP server and Claudeforce-based integrations connecting Claude to Salesforce data and metadata for security remediation, compliance reporting, and tech-debt reduction (see Selected Projects).
- Architected scalable Service Cloud and Experience Cloud solutions: case management, Omni-Channel routing, entitlements/SLAs, Knowledge, and self-service portals.
- Owned end-to-end delivery in Agile teams, from solution blueprints, data and security models, and environment strategy to go-live; ran design reviews against best practices and governor limits.
- Designed integrations with core banking and enterprise systems using REST/SOAP APIs and Platform Events, and built accessible LWC/Aura experiences.
- Ensured GDPR and FCA compliance through robust sharing, permission, and encryption models.
- Established DevOps and CI/CD practices (Git, SFDX, Copado/Jenkins), code review standards, and release management.
- Mentored onshore/offshore teams, ran technical workshops including Agentforce enablement, and partnered with senior stakeholders on roadmap and AI adoption.
- Led production root-cause analysis and platform health checks; owned and closed Cybersecurity Observations (CSOs) and technical debt, keeping applications compliant with Barclays' risk and audit requirements.

SELECTED PROJECTS

AI-Assisted Security Remediation: MCP Server for Salesforce & AppOmni Violation Fixes

- Set up a Salesforce MCP (Model Context Protocol) server so an AI assistant could securely read org metadata (Apex, LWC, Flows, permission sets, Experience Cloud and guest-user configuration) and propose fixes in a controlled developer workflow.
- Ingested AppOmni-reported violations (excessive permissions, guest-user exposure, insecure sharing, missing CRUD/FLS enforcement) and used the MCP-connected assistant to triage findings, locate affected components, and draft remediation changes for engineer review.
- Applied least-privilege access for the MCP connection, human-in-the-loop approval, and validation through unit tests, PMD/SonarQube, and CI/CD deployment checks before release.
- **Outcome:** Faster closure of AppOmni findings with consistent, reviewable fixes, and a repeatable AI-assisted remediation pattern adopted by the COE.

Compliance Case Pipeline Dashboard using Claudeforce

- Used Claudeforce (Claude connected to Salesforce through its governed integration) to build a pipeline dashboard for compliance cases, showing cases by stage, ageing, regulatory deadline and SLA risk, owner workload, and escalations.
- Claude accessed case data strictly within existing Salesforce permissions, sharing rules, and FLS, with outputs reviewed by compliance leads before use.
- **Outcome:** On-demand visibility of the compliance case pipeline and at-risk cases without manual report building.

Agentforce for Service: AI Agent for Case Management

- Architected an Agentforce service agent with defined topics, guardrails, and custom actions (Apex/Flow/REST) for case triage, status lookup, and knowledge-grounded answers.
- Used Prompt Builder templates, Data Cloud / Knowledge grounding, and Einstein Trust Layer controls to keep responses accurate, masked, and auditable; validated behaviour through structured agent testing.
- **Outcome:** Reduced manual case handling and improved self-service experience.

Cybersecurity Hardening & Tech-Debt Reduction

- Drove org-wide remediation across Apex, LWC, and Flows. Implemented CRUD/FLS gates, protected guest user contexts, removed insecure endpoints and connected apps, added deployment validation packages, and refactored monolithic triggers into handler-pattern modules.
- **Outcome:** Reduced security findings by ~70% and improved deployment quality.

Case Management Compliance Application

- Designed and built a secure Case Management application for internal users with profile-based access, flow-based case creation, a custom LWC for case management, and robust data sharing.
- **Outcome:** Improved self-service adoption and reduced support tickets.

KTLO (Keep-the-Lights-On) Support on Production Incidents

- Led troubleshooting and resolution of high-priority production issues, coordinated with cross-functional teams, and delivered sustainable solutions to maintain system stability and performance.

BNY Mellon | Pune, India **Jun 2016 – Dec 2018**

SDET (UI Development & UI Test Automation)

- Tested the Salesforce Service Cloud case management application, ensuring accurate case lifecycle functionality and seamless customer interactions.
- Performed functional, regression, and integration testing across custom objects, workflows, and automation.
- Collaborated with developers and business teams to identify defects, validate data integrity, and ensure high-quality releases.

Fiserv | Pune, India **May 2012 – May 2016**
SDET

- Automated functional and regression testing for an on-premises, .NET-based credit union application using UFT and VBScript.
- Developed robust scripts to validate core banking workflows, data accuracy, and compliance standards.
- Partnered with business teams to enhance test coverage, resolve defects, and ensure seamless releases.

EDUCATION

Bachelor of Engineering (E&TC)
University of Pune **2007 – 2010**

AWARDS & RECOGNITION

- Spot Award for delivery excellence and security leadership (Barclays).
- Innovation Award for LWC component library and performance improvements.
